Contact: 7972274886

A dedicated and detail-driven Computer Science graduate from B.K. Birla College, Kalyan (CGPA 7+), with a passion for backend development and building robust, scalable systems. Experienced in Python, MySQL, and core backend logic, I enjoy optimizing performance, managing databases, and developing clean APIs that power efficient applications. Problem-solving mindset, I'm eager to contribute to backend-focused roles and solve real-world challenges with clean, maintainable code.

EDUCATION HISTORY

Graduation	Class XII	Class X
Course: B.Voc.Cyber Security and forensic College: B.K.Birla College Kalyan - Mumbai University Year of Passing: 2025 Avg. Grade:- 7+/10	Board: Maharashtra State Board Medium: English Year of Passing: 2022 Grade: 60%	Board: Maharashtra State Board Medium: English Year of Passing: 2020 Grade: 73%

PROFESSIONAL Skills

Backend Programming: Proficient in server-side languages such as Python with the ability to design and implement scalable backend logic and system workflows.

Database Management: Skilled in using relational (MySQL) databases for designing schemas, writing optimized queries, and ensuring data consistency.

API Development: Experienced in creating and managing RESTful APIs, enabling smooth communication between frontend interfaces and backend services.

Error Handling & Debugging: Capable of identifying, tracing, and resolving bugs efficiently using backend logs and structured debugging techniques.

Code Quality & Maintenance: Follows clean code principles, modular architecture (MVC), and adheres to documentation standards for long-term maintainability.

Languages Known	Backend developer Skills
- English - Hindi - Marathi	- Python - MySQL - Flask / Django

PROJECTS

Carnival Event Management System

A web application for managing carnival events with:

- User registration and login functionality.
- Volunteer management portal.

- Admin dashboard for event oversight.
- Date validation and image verification features.
- Separate interfaces for users, volunteers, and administrators.

Fitness Exercise Tracker Web Application

web application that tracks and analyzes workout exercises

- Developed a Flask-based web application that tracks and analyzes workout exercises in real-time using computer vision.
 - Implemented exercise-specific endpoints (bicep curls, squats, jumping jacks, lunges) with live video feed processing.
 - Designed a responsive frontend interface to display exercisetracking results.
-
